Project Name	Import Data Using Transform Maps (Spreadsheet)	Maximum Marks	2 Marks

Customer Problem Statement Template

A customer problem statement describes the customer's point of view: who they are, what they want to achieve, the barrier they face, why it happens, and how it makes them feel. The statements below are tailored to the ServiceNow spreadsheet-import project.

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1 Accurate employee data import	A ServiceNow administrator who maintains employee records.	Import multiple employee records from an Excel spreadsheet into ServiceNow quickly.	Manual entry is time-consuming and can introduce typing mistakes or inconsistent values.	Spreadsheet data must be transferred to correct target fields and verified after import.	Frustrated by repetitive work and concerned about inaccurate or incomplete records.
PS-2 Avoid duplicate or incorrect records	A ServiceNow administrator responsible for reliable employee records.	Update existing employee records and verify imported information without unnecessary duplicates.	Records may be duplicated or updated incorrectly if the matching field is not unique or coalesce is misconfigured.	The Transform Map needs a reliable identifier, such as a unique Employee ID, and target data must be checked against the spreadsheet.	Unsure whether employee data is consistent until the records have been verified.

Project context: Employee Import (u_employee_import) is the staging table and Employee Test (u_employee_test) is the target table. The project includes five field mappings, six sample employee records, and reports for employee list, department, and location.

Configuration note: The supplied screenshot shows coalesce enabled on Employee Name. If Employee ID is intended to be the unique identifier, verify this setting in ServiceNow before relying on it for duplicate prevention.
