Empathize & Discover — Empathy Map Canvas

Date	03 October 2026	Team ID	SWTID-2026-7959
Project Name	Import Data Using Transform Maps (Spreadsheet)	Maximum Marks	4 Marks

Empathy Map Canvas: This map captures the likely needs and experiences of a ServiceNow administrator who imports employee data from spreadsheets. It is based on the supplied project screenshots and implementation details.

THINK & FEEL • “I need the employee data to be accurate.” • “I want to avoid missing fields and duplicate records.” • I feel responsible for keeping employee information reliable.	SERVICE NOW ADMINISTRATOR Primary user Responsible for importing and maintaining employee records.	SEE • Employee details supplied in a spreadsheet. • Source columns: Employee ID, Name, Email, Department, Location. • ServiceNow Import Set, Transform Map, target table, and reports.
HEAR • Colleagues ask for employee records to be updated quickly. • Team members expect department and location details to be correct. • Users may report missing or incorrect employee information.	SAY & DO • Upload spreadsheet data into the Employee Import table. • Map source fields to Employee Test fields. • Run the transform, review records, and check reports.	
PAIN • Manual data entry takes time. • Incorrect field mapping can put values in the wrong columns. • Duplicate or outdated records may occur if matching rules are incorrect. • Import results need manual verification.	GAIN • Faster import of multiple employee records. • Consistent mapping from spreadsheet to ServiceNow fields. • More reliable employee data and fewer manual errors. • Quick review through employee list, department, and location reports.	

Project evidence: Employee Import (u_employee_import) is the staging table; Employee Test (u_employee_test) is the target table. The setup includes five field mappings, six sample employee records, and three reports: Employees List, Employees by Department, and Employees by Location. **Configuration check:** The supplied screenshot shows coalesce enabled on Employee Name; verify the coalesce field if Employee ID is intended to be the unique identifier.
