

PROJECT DESIGN PHASE-II

Data Flow Diagrams & User Stories

Date	03 October 2026	Team ID	SWTID-2026-7959	Project Name	Import Data Using Transform Maps (Spreadsheet)	Maximum Marks	4 Marks
------	-----------------	---------	-----------------	--------------	--	---------------	---------

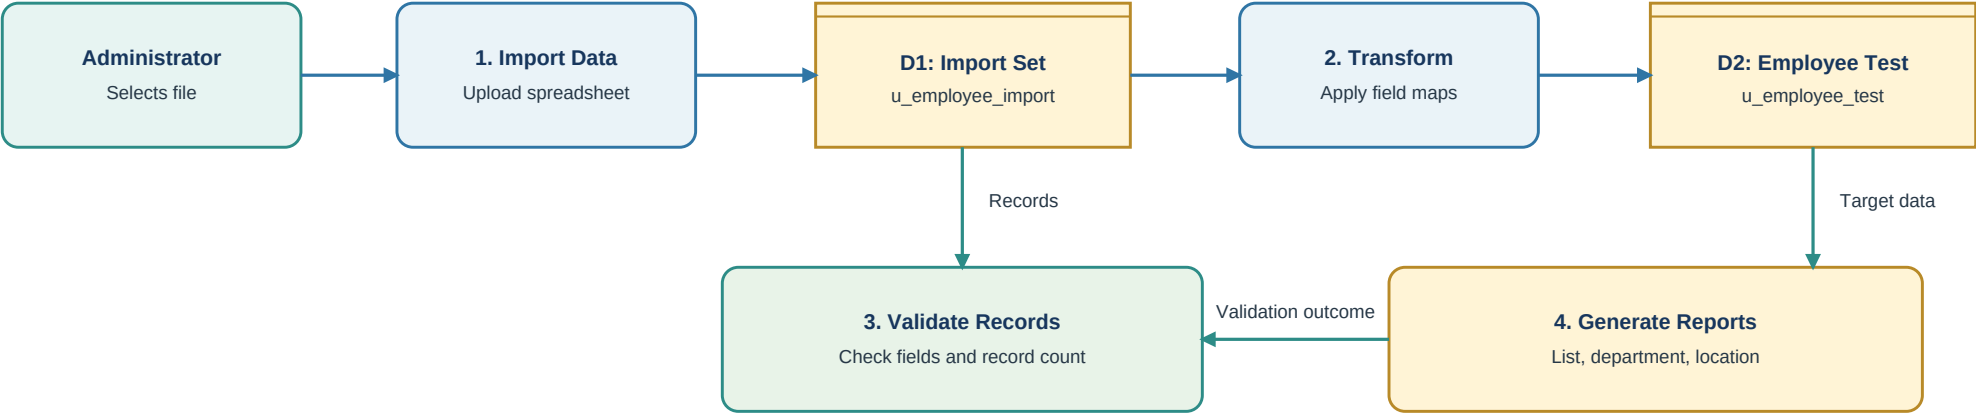

Data Flow Diagrams: A DFD shows how employee spreadsheet data enters ServiceNow, moves through the import and transform processes, is stored in tables, and is reviewed through reports. The diagrams below are based on the supplied project screenshots and table/field mapping details.

Level 0 DFD — Context View

Source columns: Employee ID • Name • Email • Department • Location

Level 1 DFD — Import and Transform Process

Project data: Source columns are Employee ID, Name, Email, Department, and Location. The import set table is **u_employee_import**; the target table is **u_employee_test**. The setup contains five field mappings, six sample employee records (SB0001–SB0006), and three reports: Employees List, Employees by Department, and Employees by Location.

USER STORIES

User stories for the ServiceNow spreadsheet import workflow

The stories below use the template's fields: User Type, Functional Requirement (Epic), User Story Number, User Story / Task, Acceptance Criteria, Priority, and Release. Priorities and sprint assignments are proposed for this project.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance Criteria	Priority	Release
Administrator	Spreadsheet preparation	USN-1	As an administrator, I want to prepare a spreadsheet with Employee ID, Name, Email, Department, and Location so that employee data is organized before import.	The spreadsheet contains the five expected columns; headers are clear; six sample records can be read.	High	Sprint-1
Administrator	Import data	USN-2	As an administrator, I want to upload the spreadsheet into Employee Import (u_employee_import) so that rows are staged in ServiceNow.	The import set is created; source rows appear in the staging table; import status is available for review.	High	Sprint-1
Administrator	Field mapping	USN-3	As an administrator, I want to map Employee ID to u_employee_id so that each imported employee has an identifier.	The source Employee ID maps to the target Employee ID field and values match the spreadsheet.	High	Sprint-1
Administrator	Field mapping	USN-4	As an administrator, I want to map Name, Email, Department, and Location to their target fields so that all employee details are transferred correctly.	All five source fields have the intended target mapping; sample target records show matching values.	High	Sprint-1
Administrator	Transform records	USN-5	As an administrator, I want to run the Transform Map so that staged rows are transferred into Employee Test (u_employee_test).	The transform completes; expected employee records appear in the target table; any errors can be reviewed.	High	Sprint-1
Administrator	Duplicate handling	USN-6	As an administrator, I want to configure and verify the coalesce field so that re-importing data does not unintentionally create duplicate employee records.	The chosen coalesce field matches the intended unique identifier; a test re-import updates or matches records as expected.	High	Sprint-2
Administrator	Data validation	USN-7	As an administrator, I want to compare imported target records with the source spreadsheet so that missing or incorrect values can be identified.	Employee ID, name, email, department, and location are checked for sample records; discrepancies are recorded for correction.	High	Sprint-1
Administrator	Employee list report	USN-8	As an administrator, I want to view the Employees List report so that I can review imported employee records in one place.	The report uses Employee Test as its source and displays the expected employee records and key fields.	Medium	Sprint-2
Administrator	Department report	USN-9	As an administrator, I want to view Employees by Department so that I can understand how employee records are distributed across departments.	The report groups or summarizes employee records by Department and displays the department values from imported data.	Medium	Sprint-2
Administrator	Location report	USN-10	As an administrator, I want to view Employees by Location so that I can review employee distribution by location.	The report summarizes employee records by Location and reflects the values stored in Employee Test.	Medium	Sprint-2
Administrator	Import troubleshooting	USN-11	As an administrator, I want to review transform results and correct mapping or data issues so that future imports are more reliable.	The administrator can identify a failed or incorrect field transfer, correct the configuration or source data, and validate the rerun.	Medium	Sprint-2
Reviewer	Project verification	USN-12	As a project reviewer, I want to verify that the six sample records and three reports are available so that I can confirm the workflow is working as expected.	Records SB0001–SB0006 are present as expected and Employees List, Employees by Department, and Employees by Location reports are available.	Medium	Sprint-2

Configuration note: The supplied transform-map screenshot shows coalesce enabled on Employee Name. Verify this setting if Employee ID is intended to be the unique identifier for matching employee records.
