

PROJECT TECHNICAL REPORT

Performance Testing & Technical Evaluation

Spreadsheet Import, Transform Map, Field Mapping, Coalesce & Target Record Verification

Date	03 October 2026	Team ID	SWTID-2026-7959
Project Domain	ServiceNow data import and transformation	Assessment	Technical Evaluation & UAT Preparation

1. Executive Summary & ServiceNow Environment

This report evaluates the configured spreadsheet-import workflow in ServiceNow. The supplied project evidence shows an Import Set source table, a Transform Map, a target table, configured field mappings, sample target records, and three reports. Execution timings, throughput, and benchmark measurements were not supplied; therefore, no measured performance claims are reported.

Platform / Component	Scope of Evaluation
Employee Import (u_employee_import)	Import Set staging table used to receive spreadsheet rows before transformation.
Sample Spreadsheet Import (Transform Map)	Configured transformation from import-source fields into the Employee Test target table.
Employee Test (u_employee_test)	Target table containing employee ID, employee name, email, department, and location fields.
Field Mapping & Coalesce	Five configured mappings are visible. Employee Name is mapped from source Name with Coalesce enabled.
ServiceNow Reports	Employees List, Employees by Department, and Employees by Location reports are configured.
Performance Measurement	Import duration, transform duration, throughput, and larger-load behaviour remain unmeasured.

2. Workload Profiles & Test Scenarios

Scenario ID	Target Technology	Workload Volume (N)	Execution Mode	Primary Metric
TS-IMP-01	Spreadsheet Import Set	Sample spreadsheet rows; visible evidence shows six target records	Import into u_employee_import	Import completion time — Not measured
TS-TM-02	Transform Map	Source rows to target records	Run Sample Spreadsheet Import	Transform duration — Not measured
TS-MAP-03	Field Mapping	Five configured mappings	Verify mapped field values	Mapping accuracy — Not tested
TS-COA-04	Coalesce / Duplicate Handling	Employee Name coalesce configured	Import a controlled duplicate for verification	Duplicate handling — Not tested
TS-TGT-05	Target Table	Six visible sample records SB0001–SB0006	Compare source and target values	Record reconciliation — Not verified
TS-RPT-06	ServiceNow Reports	Three configured reports	Run and compare report output	Report response time — Not measured

3. Empirical Performance Benchmarking Results

The template's benchmark table is retained, but numerical measurements are not available in the supplied evidence. Run the tests and record actual values before making performance or SLA claims.

Test ID	Platform / Stack	Duration (t)	Throughput (T)	Average Latency	Status
TS-IMP-01	Spreadsheet Import Set	Not measured	Not measured	Not measured	Not tested
TS-TM-02	Transform Map	Not measured	Not measured	Not measured	Not tested
TS-MAP-03	Field Mapping	N/A	Not measured	Not measured	Not tested
TS-TGT-05	Target Record Verification	Not measured	Not measured	Not measured	Not tested
TS-RPT-06	ServiceNow Reports	Not measured	Not measured	Not measured	Not tested

SLA Compliance Margins

Test ID	SLA Target	Measured	Margin vs SLA
TS-IMP-01	Not defined in supplied project evidence	Not measured	Not calculated
TS-TM-02	Not defined in supplied project evidence	Not measured	Not calculated
TS-RPT-06	Not defined in supplied project evidence	Not measured	Not calculated

4. Mathematical Formulas & Throughput Calculations

- Record Throughput Rate (T): $T = N / t$, where N is the number of processed records and t is elapsed processing time. Calculate only after recording both values.
- Average Processing Time per Record: Average time = total elapsed time / number of successfully processed records. Use a consistent timing boundary for repeatable results.
- Record Reconciliation Rate: Reconciliation rate = (records verified as correct / records checked) × 100%. No rate is reported because verification results were not supplied.

5. Bottleneck Diagnostics & System Triage

Platform / Component	Bottleneck / Cause	Diagnostic / Optimization Action
Spreadsheet Import Set	No measured bottleneck provided.	Measure import duration and inspect import-set errors for a representative file.
Transform Map	No measured bottleneck provided.	Time the transform run; inspect transform history and row-level errors.
Field Mapping & Coalesce	Duplicate handling and mapping accuracy have not been execution-tested.	Test controlled duplicate and non-duplicate rows; verify the intended target fields.
Employee Test Target Table	Record reconciliation not yet verified.	Compare source rows against target records and confirm field values.
ServiceNow Reports	Report runtime and output accuracy not measured.	Run all three reports and compare their results with target-table data.

6. User Acceptance Testing (UAT) Sign-Off Matrix

UAT Module	Acceptance Criteria	Evidence / Feedback	Sign-Off Status
Spreadsheet Import	Source spreadsheet rows are staged in the Import Set without unexpected omissions.	Execution evidence not supplied.	Not tested
Transform Map & Field Mapping	Employee ID, Email, Name, Location, and Department map to intended target fields.	Five mapping configurations visible; runtime verification not supplied.	Not tested
Coalesce / Duplicate Handling	Configured coalesce behaviour matches the intended duplicate-handling rule.	Coalesce is enabled on Employee Name; duplicate test evidence not supplied.	Not tested
Target Table & Reports	Target records and report outputs agree with the source data.	Six sample records and three report configurations visible; reconciliation not supplied.	Not tested

Final Conclusion & Sign-Off Recommendation

The supplied screenshots support that the ServiceNow import table, Transform Map, five field mappings, target table, six sample target records, and three reports are configured. Performance measurements, complete record reconciliation, and UAT execution results were not supplied. Performance acceptance and production sign-off should remain pending until the relevant tests are executed and documented.
