Project Name	Import Data Using Transform Maps (Spreadsheet)	Maximum Marks	4 Marks

1. Purpose of Document

This document describes the planned test coverage and current evidence status for the ServiceNow spreadsheet-import workflow at User Acceptance Testing (UAT). The project evidence shows an Import Set, Transform Map, target table, configured mappings, sample records, and reports. Execution results have not been provided.

Stage	Focus of Testing
Import	Import spreadsheet rows into Employee Import (u_employee_import).
Mapping	Map source fields to Employee Test (u_employee_test) using the Transform Map.
Deduplication	Verify the configured coalesce rule on Employee Name with controlled duplicate data.
Validation	Check source values and confirm Employee ID, Email, Employee Name, Department, and Location fields.
Verification	Compare transformed target records and the Employees List, Employees by Department, and Employees by Location reports.

2. Defect Analysis

Defect counts and resolution classifications were not provided in the supplied project evidence.

4. Exception Reporting

Exception / Issue	Status	Action
Invalid or missing source field	Not tested	Validate source headers and required values before transformation.
Duplicate record / Coalesce behaviour	Not tested	Run a controlled duplicate test and verify the target record behaviour.
Field mapping mismatch	Not tested	Compare source values with the intended target fields after transformation.
Transformation error	Not tested	Review transform history and error details if a failure occurs.

5. Final Report Output

Metric	Result	Metric	Result
Total UAT Test Cases	8	Not Tested	8
Passed	0	Open Issues	Not assessed
Failed	0	Pass Rate	Not calculated

The available screenshots support the configuration of the import table, Transform Map, five field mappings, target table, six sample records (SB0001–SB0006), and three reports. UAT execution and defect counts remain unverified.
