

Project Report

1. INTRODUCTION

1.1 Project Overview

The project **Import Data Using Transform Maps (Spreadsheet)** demonstrates importing employee details from a spreadsheet into ServiceNow. Data is staged in the Employee Import table (**u_employee_import**), processed through the Sample Spreadsheet Import Transform Map, and stored in the Employee Test table (**u_employee_test**).

1.2 Purpose

To simplify spreadsheet-based employee data entry, map source fields to target fields, and make imported records available for review in ServiceNow.

2. IDEATION PHASE

2.1 Problem Statement

Manual entry of employee records can take time and cause typing mistakes or inconsistent data. A spreadsheet import process transfers structured employee details into ServiceNow through configured field mappings.

2.2 Empathy Map Canvas

Says	Employee data should be imported correctly.
Thinks	Do spreadsheet columns match the target fields?
Does	Prepares the spreadsheet, imports records, and checks the target table.
Feels	Wants to avoid missing, incorrect, or duplicated records.

2.3 Brainstorming

Use a spreadsheet as the source, load rows into an Import Set table, configure source-to-target field mappings in a Transform Map, verify employee records, and review reports.

3. REQUIREMENT ANALYSIS

3.1 Customer Journey map

Stage	User action	Check
Prepare	Prepare employee spreadsheet.	Confirm expected columns are present.
Import	Load rows into the Import Set table.	Review staging rows.
Transform	Run the Transform Map.	Verify source-to-target mappings.
Verify	Open Employee Test records.	Compare source and target values.
Review	Open configured reports.	Check list, department, and location views.

3.2 Solution Requirement

Requirements: a spreadsheet with Employee ID, Name, Email, Department, and Location; an Import Set staging table; a Transform Map with field mappings; a target employee table; and reports for viewing employee records.

3.3 Data Flow Diagram

3.4 Technology Stack

- **ServiceNow Platform** — platform for configuring the import workflow.
- **Import Set Table** — stages spreadsheet data in u_employee_import.
- **Transform Map** — maps source fields to target fields.
- **Employee Test Table** — stores transformed employee records in u_employee_test.
- **Spreadsheet (Excel)** — source data with Employee ID, Name, Email, Department, and Location.
- **ServiceNow Reports** — displays employee records by list, department, and location.

4. PROJECT DESIGN

4.1 Problem Solution Fit

The solution reduces repetitive manual entry by transferring structured employee data from a spreadsheet into ServiceNow through staging, field mappings, a target table, and reports.

4.2 Proposed Solution

Prepare the spreadsheet, import rows into Employee Import, run the Sample Spreadsheet Import Transform Map, verify Employee Test records, and review Employees List, Employees by Department, and Employees by Location reports.

4.3 Solution Architecture

Spreadsheet → Employee Import staging table → Sample Spreadsheet Import Transform Map → Employee Test target table → Employees List / Employees by Department / Employees by Location reports.

5. PROJECT PLANNING & SCHEDULING

5.1 Project Planning

Sequence: prepare and check the spreadsheet; configure staging and target tables; configure field mappings; import and transform data; verify target records; review reports; and document test outcomes.

6. FUNCTIONAL AND PERFORMANCE TESTING

6.1 Performance Testing

Available evidence shows the Transform Map configuration, five field mappings, six sample target records (SB0001–SB0006), and three reports. No measured import duration, throughput, error rate, or benchmark was supplied. Performance should be measured using a larger dataset while recording duration, row counts, and errors.

Functional checks include confirming each source field maps correctly, comparing source and target counts, checking coalesce behaviour, testing invalid or blank values, and reviewing the three reports.

7. RESULTS

7.1 Output Screenshots

Project outputs include the Sample Spreadsheet Import Transform Map with five field mappings, Employee Import staging table, Employee Test target table, six sample records (SB0001–SB0006), and the Employees List, Employees by Department, and Employees by Location reports.

These outputs demonstrate the configured workflow and available records. Measured performance results were not provided.

8. ADVANTAGES & DISADVANTAGES

Advantages

- Reduces repetitive manual data entry.
- Stages data before transformation for easier review.
- Uses explicit source-to-target field mappings.
- Provides reports to review records by list, department, and location.

Disadvantages

- Incorrect spreadsheet formats may cause import issues.
- Unsuitable coalesce fields may cause incorrect record matching.
- Invalid or incomplete data may need correction before import.
- Performance on larger datasets has not yet been measured.

9. CONCLUSION

The project demonstrates a ServiceNow spreadsheet import workflow using an Import Set staging table, a Transform Map with five field mappings, an employee target table, sample records, and reports. It provides a structured way to import and review employee data. Further validation is needed for duplicate handling, invalid values, record reconciliation, and performance.

10. FUTURE SCOPE

Future improvements may include validating required fields and email formats before import, confirming a stable unique coalesce key, logging failed rows, reconciling source and target counts, testing larger datasets, and scheduling recurring imports if required.

11. APPENDIX

Source Code(if any)

No custom source-code files were supplied for inclusion. The project is configured through ServiceNow tables, field mappings, and reports.

Dataset Link

The two supplied sample spreadsheets are included below as data tables.

Sample spreadsheet

Employee ID	Name	Email	Department	Location
SB0001	user1	user1@gmail.com	ServiceNow	Tamil Nadu
SB0002	user2	user2@gmail.com	ServiceNow	Tamil Nadu
SB0003	user3	user3@gmail.com	ServiceNow	Tamil Nadu
SB0004	user4	user4@gmail.com	ServiceNow	Tamil Nadu
SB0005	user5	user5@gmail.com	Salesforce	Tamil Nadu

Sample spreadsheet (1)

Employee ID	Name	Email	Department	Location
SB0001	user1	user1@gmail.com	Servicenow	Tamil Nadu
SB0002	user2	user2@gmail.com	Servicenow	Tamil Nadu
SB0003	user3	user3@gmail.com	Servicenow	Tamil Nadu
SB0004	user4	user4@gmail.com	Servicenow	Tamil Nadu
SB0005	user5	user5@gmail.com	Salesforce	Tamil Nadu
SB0006	user6	user6@gmail.com	Salesforce	Tamil Nadu
